**Additive Manufacturing**

**Degrees Offered**
- Graduate Certificate in Additive Manufacturing
- Master of Science in Additive Manufacturing (Non-Thesis)

**Program Description**

The Additive Manufacturing Program provides graduates and professional students with the practical, interdisciplinary skills to apply cutting-edge manufacturing techniques to a wide range of industries, including aerospace, biomedical, defense and energy, among others.

This program highlights the process, design, materials, data aspects and operational efficiency aspects of additive manufacturing with an emphasis on additive manufacturing of structural materials and smart manufacturing operations.

**Master of Science in Additive Manufacturing (Non-Thesis) (30 credits)**

The Master of Science in Additive Manufacturing (Non-Thesis) provides students the opportunity to explore a wide range of manufacturing technologies and methodologies necessary to fabricate engineered products in current and emerging markets.

The core courses in the Additive Manufacturing program give students a foundation in additive manufacturing along with options to explore topics across various fabrication and manufacturing efficiency areas. Students enrolled in the Master of Science in Additive Manufacturing (Non-Thesis) program will complete 9 credits of core courses listed below along with 21 credits of elective courses from the Additive Manufacturing list. The elective list is broken into focus areas to aid students interested in a specific area of additive manufacturing. Students are not required to select a focus area but can choose electives across the entire list. To achieve the Master of Science (Non-Thesis), only 9 of the 30 required credits can be coursework at the 400-level or lower.

**Total Semester Hrs** 30.0

**Mines' Combined Undergraduate / Graduate Degree Program**

Students enrolled in Mines' combined undergraduate/graduate program may double count up to six credits of graduate coursework to fulfill requirements of both their undergraduate and graduate degree programs. These courses must have been passed with “B-” or better, not be substitutes for required coursework, and meet all other University, Department, and Program requirements for graduate credit.

Students are advised to consult with their undergraduate and graduate advisors for appropriate courses to double count upon admission to the combined program.

**Additive Manufacturing Electives**

Note that, while the listed electives are grouped into focus areas, students are not required to select a specific focus area for their degree.

**Materials Manufacturing Electives**

**Design Manufacturing Focus Area**
- EENG515 COMPUTATIONAL MECHANICS 3.0
- MTGN414 ADVANCED PROCESSING AND SINTERING OF CERAMICS 3.0
- MTGN442 ENGINEERING ALLOYS 3.0
- MTGN445 MECHANICAL PROPERTIES OF MATERIALS 3.0
- MTGN464 FORGING AND FORMING 2.0
- MTGN531 THERMODYNAMICS OF METALLURGICAL AND MATERIALS PROCESSING 3.0
- MTGN536 OPTIMIZATION AND CONTROL OF METALLURGICAL SYSTEMS 3.0
- MTGN557 SOLIDIFICATION 3.0
- MTGN560 ANALYSIS OF METALLURGICAL FAILURES 3.0
- MTGN564 ADVANCED FORGING AND FORMING 3.0
- MTGN565 MECHANICAL PROPERTIES OF CERAMICS AND COMPOSITES 3.0
- ELECT Electives As Approved By Advisor

**Elective**
- Electives As Approved By Advisor

**Design Manufacturing Focus Area**
- AMFG521 DESIGN FOR ADDITIVE MANUFACTURING 3.0
- AMFG522 DESIGN FOR ADDITIVE MANUFACTURING 3.0
- MEGN453 AEROSPACE STRUCTURES 3.0
- MEGN481 MACHINE DESIGN 3.0
- ELECT Electives As Approved By Advisor

**Manufacturing Controls and Data Science Focus Area**
- AMFG511 DATA DRIVEN ADVANCED MANUFACTURING 3.0
- CSCI507 INTRODUCTION TO COMPUTER VISION 3.0
- CSCI534 ROBOT PLANNING AND MANIPULATION 3.0
- CSCI562 APPLIED ALGORITHMS AND DATA STRUCTURES 3.0
- CSCI575 ADVANCED MACHINE LEARNING 3.0
- CSCI587 CYBER PHYSICAL SYSTEMS SECURITY 3.0
- DSCI/MATH530 STATISTICAL METHODS I 3.0
- EENG509 SPARSE SIGNALPROCESSING 3.0
- EENG515 MATHEMATICAL METHODS FOR SIGNALS AND SYSTEMS 3.0
- EENG517 THEORY AND DESIGN OF ADVANCED CONTROL SYSTEMS 3.0
- MATH551 COMPUTATIONAL LINEAR ALGEBRA 3.0
- MEGN441 INTRODUCTION TO ROBOTICS 3.0
- MEGN540 MECHATRONICS 3.0
- MEGN544 ROBOT MECHANICS: KINEMATICS, DYNAMICS, AND CONTROL 3.0
AMFG501. ADDITIVE MANUFACTURING. 3.0 Semester Hrs.
This course gives students a broad understanding of additive manufacturing (AM) techniques (popularly known as 3d printing) and how these techniques are applied to make engineered products. The course covers the seven standard classifications of AM processes and compares and contrasts each technique alongside legacy fabrication methods such as milling. Students will also get a high-level view of design, material, and pre/post-processing requirements for AM produced parts along with a fundamental understanding of the cost drivers that make AM competitive over legacy fabrication methods. Prerequisites: MEGN200 and MEGN201 or equivalent project classes.
AMFG531. MATERIALS FOR ADDITIVE MANUFACTURING. 3.0
Semester Hrs.
(II) This course will cover various structural materials used in additive manufacturing (AM) processes. Focus will be on polymer, ceramic, and metallic compositions. General chemistry of each material will be covered with additional focus on the behavior of these materials when processed using AM. The course will span the entire AM lifecycle from feedstock fabrication to fabrication by AM to post processing and inspection of as-fabricated material. Students will have hands-on exposure to AM processes and will conduct laboratory studies of AM material properties. Additionally, students will conduct a semester-long research project exploring some aspect of AM materials. 3 hours lecture; 3 semester hours.

AMFG581. OPTIMIZATION MODELS IN MANUFACTURING. 3.0
Semester Hrs.
This course explores the process of taking known inputs such as costs, supplies and demands, and determining values for unknown quantities (variables) so as to maximize or minimize some goal (objective function) while satisfying a variety of restrictions (constraints). Such problems arise in manufacturing operations as personnel planning, product sequencing, and plant scheduling. We examine a variety of manufacturing settings, e.g., flow shops, job shops, flexible manufacturing shops, and the corresponding appropriate models to optimize operations. The course explores a mix of mathematical modeling, software use and case studies. Prerequisite: Junior standing in an engineering major, or instructor consent.

AMFG591. ECONOMIC CONSIDERATIONS FOR ADDITIVE MANUFACTURING. 1.0 Semester Hr.
This course will provide students an opportunity to explore the economic considerations for advanced manufacturing processes, specifically additive manufacturing (AM). So often, these processes are thought of as being quick, easy, and cheap. While this can be true for prototypes and other non-critical parts, the reality is much different when working with engineered parts. An examination of the underlying engineering details for AM processes reveals many elements of cost and time which must be accounted for when evaluating the affordability of AM for any application. Students will learn about recurring and non-recurring costs, the reasons for post-processing steps such as machining, mechanical testing, and non-destructive inspection, and the impacts of these considerations on cost and manufacturing span-time. Students should expect to come away from this course better equipped to assess the economic viability of AM for engineering applications.

AMFG592. ADDITIVE MANUFACTURING BUILD PREPARATION. 1.0 Semester Hr.
This course covers practical aspects of additive manufacturing build preparation, which include designing a part, part build orientation, and support structures. It distinguishes these concepts from those of traditional manufacturing methods and addresses how they influence final part outcome in regard to mechanical performance, dimensional accuracy, surface finish, and post processing requirements. Similarities and differences in these concepts are covered as they apply to various additive manufacturing technologies. These concepts are integrated to ultimately provide students with the ability to holistically approach design for additive manufacturing. Prerequisite: AMFG401 or AMFG501.

AMFG598. SPECIAL TOPICS IN ADVANCED MANUFACTURING. 1-6 Semester Hr.
(I, II) Pilot course or special topics course. Topics chosen from special interests of instructor(s) and student(s). Usually the course is offered only once. Prerequisite: none. Variable credit; 1 to 6 credit hours. Repeatable for credit under different titles.
